PATIENT-SPECIFIC **BLISTERING**

Always the right drug, at the right dosage and right time.

Anyone who regularly takes several medications must ensure that they are taking the right preparation at the right dosage at the right time. This is the only way to achieve optimal therapeutic success.

But sometimes it's not that easy. With an increasing number of drugs that must be permanently taken, the risk of incorrect intake increases. As a result, one's health will not improve as usual, but it can even worsen significantly. The frequently changing appearance of drug packs and tablets can also lead to dangerous mix-ups if the patient is overwhelmed.

The so-called "blistering", which is individually tailored to the individual patient, ensures that all medicines can be taken in a simple, transparent and therapy-safe manner. In addition, all prescribed drugs are checked for interactions and possible contraindications.

TECHNOLOGY AND EXPERTISE

At Leibniz-Apotheke Berlin innovative technology and extensive quality systems are used in accordance with the criteria of pharmaceutical manufacturing companies. The medicines are

put together according to the plans given by doctors and always meet the high requirements for drug safety.

TESTING FOR INTERACTIONS AND CONTRAINDICATIONS

All prescribed medications are checked for interactions and contraindications. This is especially important if medications have been prescribed by more than one doctor, or if additional preparations or supplements are being taken.

COMPILATION IN INDIVIDUAL COMPARTMENTS

While maintaining the highest hygiene standards, the medication is placed in a precisely defined compartment for each time of consumption. The individual compartments of the blister pack are labeled with the respective intake times or special times.

HIGH SECURITY

The time of intake can therefore be read directly. Not only the patient himself, but everyone involved always knows when which tablets are to be taken and whether they have actually been taken.

PRESCRIPTION – ORDERS FROM THE DOCTOR

On request, Leibniz-Apotheke can take over the prescription request from the doctor for you and order a new prescription in good time. In the future it will also be possible to manage your e-prescriptions. We store the packs for the composition of the individual medication with individual labels in the pharmacy in a box specially designed for each patient.

CHANGE IN THERAPY

Changes in medication are of course always taken into account. A brief notification or a new intake plan from your doctor is sufficient.
